

Intelligent Sequential Ring Service.

Add value to your wireline telephone service by providing a way for end-users to be contacted anywhere, not just at their home or office. Find Me offers simultaneous or consecutive ring functionality for your subscribers.

How It Works

Find Me subscribers can specify up to six (6) telephone numbers to be dialed at the same time or in succession when they receive a call. Find Me alerts the caller that it is attempting to locate the subscriber by announcing "Attempting to locate (name here). Please stay on the line." This lets the caller know to stay on the line as the service attempts to locate the subscriber.

Intelligent

Find Me is different from simultaneous ring services currently available from the switch because it offers call verification. When a call is picked up, Find Me announces "I have a call for: (name here). If that person is available at this number, press '1'. Otherwise hang up." In traditional simultaneous ring services, the service stops looking for the subscriber as soon as one of the lines is answered - which is not as effective as the verification feature of Find Me. Find Me will not allow calls to go to a machine or to voice mail unless specifically configured to do so.

Subscribers Can Easily Manage the Service

Find Me Business Applications Include

- Service Technicians
- Emergency Services
- Truck Drivers
- Real Estate Agents
- Health Care
- Farmers

Many of our Telco customers use Find Me internally.

What Our Customers Say

A Telco in Northeast South Dakota says, "One of our Find Me customers is a truck driver and he says that Find Me is saving him \$400-\$500 per month. We are also using Find Me internally to help improve communications with our service technicians."

Online Management

The Find Me service can be implemented along with ISIA (Innovative Systems Internet Access) giving subscribers ability to manage their Find Me service settings via the Internet or Phone Central. This example shows the dialing plan (action or sequence of how calls will be placed) that the subscriber has configured in Phone Central. Subscribers can also use the Settings option to change their PIN and modify other general settings.
