

# Firebar

Firebar is the tool you can depend on to quickly connect all of your emergency responders the instant a call is received.

Communities depend upon timely communication in order for response teams to react to a fire or other emergency. Many of the systems currently in use are outdated. In fact, many do not support the use of cell phones. These outdated systems put the safety of the community at risk.

Firebar Service from Innovative Systems provides your community with a reliable, efficient and highly adaptable way of connecting all your emergency responders to a call so they can quickly implement an action plan.

## What Happens During a Fireball Call?

When a call is placed to the designated emergency response number the call is routed to the APMAX which activates the Firebar Service. This in turn, places the outgoing calls to the specified DN's (responders).

As soon as a responder answers the call, he/she is immediately conferenced into the Firebar call. The Firebar conference remains in progress until everyone leaves the call. If a responder misses the initial call, he/she can use a Backdoor DN (special number) in order to join a Firebar Conference already in progress.

Emergency personnel will receive an email with a recording of calls initiated through the Firebar.

Log files are available showing the participant activity and color coded reporting on who responded to the firebar call.

Attendee	Entered	Left	Name	Verified	Barge In	Duration	CalledAddress
Original	Wed Nov 17 15:04:50 CST 2010	Wed Nov 17 15:06:43 CST 2010	605-	no	no	1:53

Subsequent #1	Wed Nov 17 15:05:05 CST 2010	Wed Nov 17 15:06:43 CST 2010	605-	no	no	1:38	
FireMember #5	CallPlaced_Ringing_End		Dan Haeder	no	no	0:00	605
Backdoor #1	Wed Nov 17 15:05:15 CST 2010	Wed Nov 17 15:05:22 CST 2010	605-	no	no	0:07	
Backdoor #2			605-	no	no	0:00	

## Failure is not an Option!

- Avoid call failure with standard redundancy
- Provides ample scalability
- Allows Backdoor DN as well as Barge-in Options
- Calls recorded & saved as .wav files

## Fully Redundant System

The APMAX includes standard redundancy without additional hardware or servers.

## Capacity

Supports up to 64 Firebars, with up to 128 responder DN's per conference and a maximum of 256 responder DN's in simultaneous conferences.

## Recording Capability

Record calls initiated through the service and store them as \*.wav files.

## Backdoor DN

Available for responders to join a Firebar Conference if they miss the initial call.

## Barge-In Option

Allows Firebar to interrupt or 'barge-in' on a call already in progress to let a responder know there is an emergency.

## Customizable DN Settings

Each responder can have their own settings related to call forwarding, ring settings, barge-in and verification.

## SIP and TDM Compatible

Works with most major switch types and is compatible with both SIP and TDM channels.
