

The powerful new SIP ACS server allows you to manage the latest cutting-edge SIP devices including phones, warehouse speakers, door security speakers, and wireless conference phones.

You can bid hosted services to your largest enterprise customers as this platform will support up to one hundred thousand devices!

Use Our Hardware or a Virtual Machine

You can choose, based on your operational needs, the Innovative Systems SIP ACS Dual-shelf server or a virtual machine.

SIP ACS Handles Firmware Upgrades

If any of your ACS supported SIP phones need important firmware updates, those updates will be pre-staged on your system and ready for you to install. Once installed, SIP ACS will push the updated firmware to these phones.

Supports All Softswitch Types

Devices can be pre-provisioned on Ribbon C-15 Softswitches, with manual line set-up for other switch types.

Same GUI as APMAX

If you have an APMAX there will be no learning curve for device and subscriber management.

Automated Configuration Service SIP ACS Server

Key Features

- Automatic provisioning of new devices
- Re-provisioning of existing devices
- Device specific firmware management
- Visual provisioning of soft keys
- Ribbon C15 MADN Support

Optional Hot-Desking Feature

This feature integrates with the APMAX ACD service and is a single shared SIP phone that allows for multiple profiles.

One-Button Provisioning

Bench provisioned phones can be programmed with a provisioning button, making it easy for customers and techs to plug and play the phones from the customer premise.

Supported Phones

ACS supports 9 different brands and over 85 models from Soft Phones to Video SIP Phones.
