

Calling Name Database

Calling Name Database

- Supports up to 12,000,000 calling names
- Supports multiple options for Out-of-Area names that are not included
- Allows for easy sharing between switches

APMax Calling Name Database is serving over a million consumers with Caller ID, one of the oldest and still most popular calling features.

Global Title Translation

The GTT feature is standard in the APMax. Used for Calling Name and CLASS, APMax can perform GTT based on 3, 6, or 10 digits.

Multiple Methods to Retrieve Calling-Name Data

APMax supports multiple options for Out-of-Area names that are not included in your Calling Name Database.

- Returns the city/state of the calling party
- Sends the request to a national database using SS7
- Returns a failure to the switch and lets the switch query a national database

Works with All Switch Types in Your Network

The Calling Name architecture allows for easy sharing between switches so that Calling Name information is moved seamlessly between multiple switch types. Caller ID Screenpop works with most major IPTV middleware providers.
